Legend Légende

Christmas Bird Count boundary	Limité du Recensement des oiseaux de Noël
Expressway or Highway	Autoroute ou route nationale (asphaltée)
Regional or local road	Réseau régional ou local (asphaltée ou non)
Resource or Recreation	Ressource / route récréative
Utility Corridor	Ligne de transport d'énergie
Rail line	Chemin de fer
Watercourse	Rivière ou ruisseau
Temperate or sub-polar needleleaf forest	Forêt de conifères tempérée ou subpolaire
Sub-polar taiga needleleaf forest	Forêt de conifères (taiga) subpolaire
Temperate or sub-polar broadleaf deciduous forest	Forêt de feuillus caducifolies tempérée ou subpolaire
Mixed forest	Forêt mixte
Temperate or sub-polar shrubland	Arbustaire tempérée ou subpolaire
Temperate or sub-polar grassland	Prairie tempérée ou subpolaire
Sub-polar or polar shrubland-lichen-moss	Arbustaire & lichens et à mousses polaire ou subpolaire
Sub-polar or polar grassland-lichen-moss	Prairie à lichens et à mousses polaire ou subpolaire
Sub-polar or polar barren-lichen-moss	Toundra à lichens et à mousses polaires ou subpolaires
Wetland	Terré humide
Cropland	Terre agricole
Barren lands	Terre stérile
Urban	Milieu urbain et bâti
Water	Eau
Snow and ice	Neige et glace
Unclassified	Non classifiée

Munster-Richmond-Manotick

ONRI

Overall: The total species count this year was **56**, same as last year and a bit below the record of 60 found in 2020. An additional 5 species were found in the 3 days prior or after count day, so **61** species in count week overall, a little below average over the previous 5 years (65). Though generally a quiet day for birds, three birds new to the count livened things up – see below! (count week photo of American Wigeon from G. Pari).

Weather: After a cold early December with significant snow, the day before the count reached a record-breaking +11 with rain that quickly froze as the temperature dropped to -11.8 degrees to start count day. The early December cold drove all but a few Canada Geese out of the circle; however open water in the Rideau River and in a few stormwater ponds resulted in a good variety of ducks – 8 species including a Pintail found by a non-CBC birder. The temperature rose to near freezing during the day, with a shift from clear skies to snow showers.

FIRSTS, HIGHS & LOWS:

Three new species for the count circle were discovered during count week, and happily all three were located again on count day. Two wigeons were present on the Rideau River in Manotick (photo above), 2 male Black-backed Woodpeckers showed up in Stony Swamp (photo below from G. Mastromatteo), and an American Coot continued its presence in a stormwater pond in Stittsville until count day (photo below from T. Endicott).

These three raised the **ONRI species list** to **85 species** with **95 count week species** (graph below).

Record high counts were set this year for **12 species** including the three new species above. Several of these record highs were for common winter birds, including Northern Cardinal, Black-capped Chickadee and Dark-eyed Junco (see table below). Pine Grosbeaks were found in many locations, and in record numbers.

Northern Cardinal at feeder (P Blancher)

Pine Grosbeak in Richmond (P Blancher)

Black-capped Chickadee in Richmond (Liam Charlebois) Eastern Screech-Owl in Stittsville (Tom Endicott)

On the low side, only 9 Canada Geese were found in the circle, vs. a record high of 6,555 in 2020! And only 2 gulls were present this year, a record low, none at the Trail Rd dump. The count of 21 diurnal raptors was on the low side, though higher than in 2017-19 when there was less coverage of the circle. The same was true of European Starlings (957 this year vs an average of 3,600 in 2020-24). All five of the owls typically encountered in the past were recorded this year, but just one Great Horned Owl, the lowest counted since 2018.

The overall tally of 9,964 birds was the lowest since 2019, and substantially below the average across the previous 5 years (14.937), though largely because of low counts of geese and starlings.

Birding Effort:

The generally low total bird count was not for a lack of birding effort! The count set new high marks for number of field observers (56), field parties (31), hours on foot (85.6) and hours by car (48.4).

Susan Waters, Ken McRae, Lynda Cronin + 4 penguins!

Barbara Bowman in sector 1

Counts by Sector: The Bells Corners crew regained the lead for most species in a sector (35), narrowly edging out Manotick (34), Stittsville (34) and Richmond South (33). This was no accident as the Bell's Corners team included 21 observers and 52 hours of effort, mostly on foot. As in past years, all sectors had at least one species seen nowhere else in the count, emphasizing the importance of all sectors to the overall count.

Participants in 2025: 65 Field Observers: 56 Feeder Watchers: 15

Effort	On Foot	By Car	Feeders	Nocturnal	Total
Hours Spent:	86	48	23	5	162
Distance (km):	152	556		26	734

Thank You! Thanks to Bill Bowman, Giovanni Pari, Gillian Mastromatteo, Tom Endicott, and Rick Collins for their leadership in ONRI sectors. Thanks to Janet Clark, and several other participants, for providing the compilation goodies. Thanks for all of the photos. A big thank you to all participants in 2025! PB

Next Year's Count date will be: **to be decided!**
